EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

SPACE BASELINE FOR MAIN CAMPUS

Strategy+ engaged with Clemson University to create a 15-year capital plan. The capital plan was created through the analysis of the existing Clemson University conditions and future projected academic needs. The project started in June 2018 and completed in November 2019. The project consisted of two phases: phase one focused on the sequencing of a 15-year capital plan to accommodate future growth needs and phase two focused on the programmatic sequencing between new renovations and construction projects.

The project process consisted of bi-monthly coordination calls with Strategy+ and monthly on-campus engagements. The on-campus engagements consisted of workshops, campus walkthroughs, surveys, and executive team presentations to establish the needs of the university from the perspective of all participating colleges. This report is structured to establish the current Clemson college conditions, goals, and needs of each college. Projected space needs were then calculated based on enrollment growth and change projections in priority programs, changes in learning pedagogy, faculty and staff projections, growth and change in research expenditures and improvements in space efficiency and utilization.

The current space types of Clemson are separated into five categories: learning, research, library/non-scheduled study, office, and support. Space data for each category, on a room-by-room basis for each building is housed on Clemson's in-house space database.

This study was confined to an analysis of this data and projects of capital projects on the main campus. It did not include other campus locations. This study also does not include assessment of housing, student union, sports and recreation facilities.

To establish current space requirements an assessment has been made for each space type category on the basis of current enrollment, research and utilization data to project 2019 benchmark areas. These calculations reflect the areas Clemson should have based on their current needs. It is important to note that some of the current space areas have a modifier to take into account suitability, new building areas, and assumed utilization.

" Clemson has a deficit range of 2% - 9% "

Future state projections are based on 2% undergraduate and 4% graduate growth over the next 15 years. Additionally, the benchmark areas are based on South Carolina Council on Higher Education standards for space and utilization.

The projected areas for learning, research, library / non-scheduled study, office and support indicate that Clemson University has a current deficit range of 2% - 9% for all space types. This indicates that Clemson will need to strategize their capital plan to accommodate and alleviate these space deficits as well as accommodating future enrollment and research growth.

CURRENT SPACE SURPLUS / DEFICIT

	Current Space* NASF (2018)	2019 Benchmark Area NASF	Surplus / Deficit NASF	% Surplus / Deficit
Learning	595,292	644,607	-49,315	-8%
Classroom	236,698			
Teaching Labs	275,583			
Service	83,011			
Research	355,808***	381,810	-26,002	-7%
Research Labs	278,686			
Research Service	77,122			
Library / Non-scheduled Study	205,593	224,559	-18,966	-9%
Non-scheduled Study Space	205,593			
Stacks	15,114**			
Office	830,666	847,260	-16,594	-2%
Faculty Offices	196,110			
Staff and Other Offices	634,556			
Support	709,932	752,888	-42,956	-6%
Student Services	532,875			

Space Baseline Table

*Current space does not include areas from the new College of Business Building, Daniel Hall Renovations and Additions, Lehotsky Hall Renovations, Long Hall Renovations, and Martin Halls. Also does not reflect modifiers like, departmental to central scheduling

**Areas not included in overall library space for benchmarking.

***Modified for suitability and assumed utilization

Future space projections are based on 2% undergraduate and 4% graduate enrollment growth over the next 15 years.

Benchmark areas do not account for suitability or quality of existing space to meet existing academic and research needs.

Benchmark areas are based of South Carolina CHE standards for space and utilization.

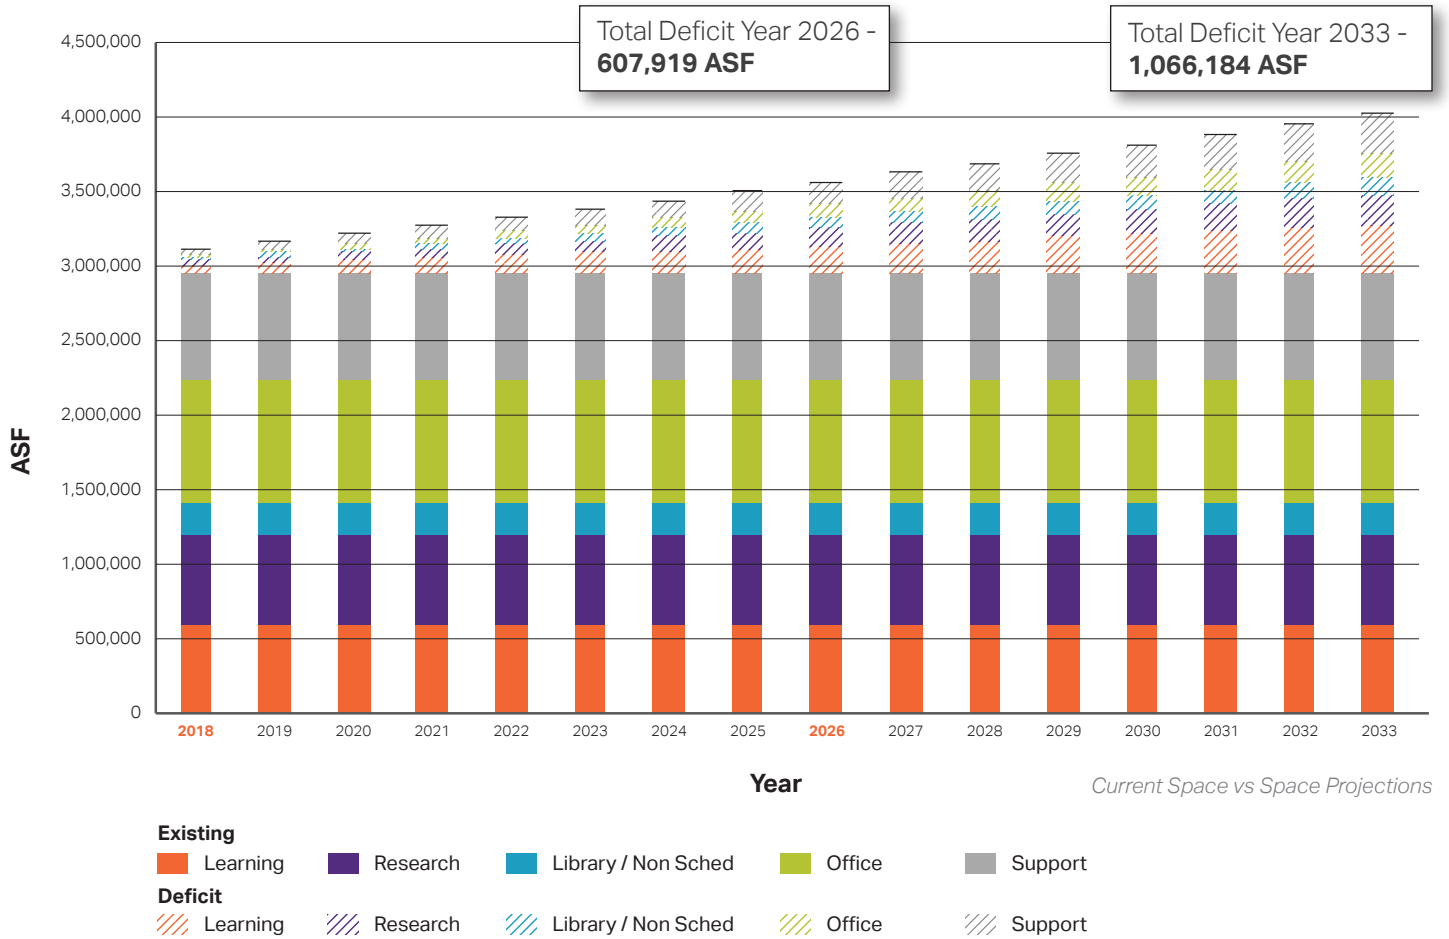

SPACE PROJECTIONS

UNDERSTANDING PROGRAM PRIORITIES

PROGRAM MOVES

PROPOSED CAPITAL SCHEDULE

SPACE PROJECTIONS

Space projections are used to illustrate the current and future facilities needs of Clemson University. The space projections are based on growth and change in student enrollment, research expenditures, student study time needs, faculty, and staff.

This growth and change data and metrics inform the space projections of each space type: learning, research, library / non-scheduled study space, office, and support. The combined values

indicate the total spatial needs of Clemson. The deficit values below are expected if no new buildings are built or space is renovated.

Total Deficit by Year 2026: **607,919 ASF**
 Total Deficit by Year 2033: **1,066,184 ASF**

As this is net square footage, the overall total, assuming an average net to gross of 65% is:
 935,260 GSF by 2026
 1,640,283 GSF by 2033

UNDERSTANDING PROGRAM PRIORITIES

A priority program list is created to understand which programs have the most need and most potential in the future growth plans of Clemson. This process sets up priority program relocations to coincide with the capital plan sequence.

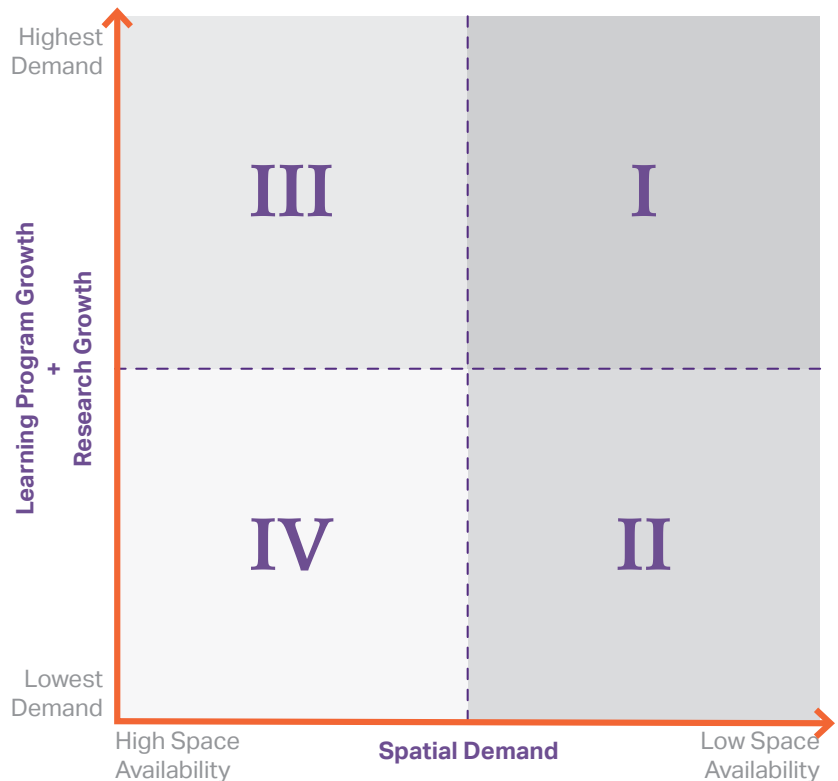

Strategy+ engaged with project team and stakeholders through workshops and questionnaires to identify priority programs. This process captured a holistic picture of all academic aspects integral to the future goals of each college and department.

The Y-axis is the results of the Learning Program Growth scores or the Research Growth Scores. The X-axis is the results of the Spatial Demand

scores. The higher the score on the Y-axis, the higher demand the program is based on learning and or research. The higher the score on the X-axis, the lower the available space for the program, which indicates a higher need to be prioritized.

The end result has the identified priority programs populated across the four quadrants. This tool is set-up to help inform Clemson on what programs have more imminent needs. All programs identified are still considered priority, but this tool is to help differentiate priority within the priorities.

- Priority I**
HIGH demand programs +
LOW space availability
- Priority II**
LOW demand programs +
LOW space availability
- Priority III**
HIGH demand programs +
HIGH space availability
- Priority IV**
LOW demand programs +
HIGH space availability

Weighing strategic growth metrics against the spatial demand, a quadrant system is used to determine the sequencing and priority of capital projects to support academic programs.

Quadrant Diagram

UNDERSTANDING PROGRAM PRIORITIES

IDENTIFYING PRIORITY PROGRAMS

	College	Undergrad	Graduate	Research
	COLLEGE OF AGRICULTURE, FORESTRY AND LIFE SCIENCES	AGRIBUSINESS AGRICULTURAL EDUCATION ANIMAL & VETERINARY SCIENCES BIOLOGY ENTOMOLOGY ENVIRONMENTAL AND NATURAL RESOURCES, FOOD SCIENCE & HUMAN NUTRITION FOREST RESOURCE MANAGEMENT HORTICULTURE PACKAGING SCIENCE PLANT & ENVIRONMENTAL SCIENCES TURFGRASS WILDLIFE & FISHERIES	AGRICULTURAL EDUCATION ANIMAL & VETERINARY SCIENCES BIOLOGY ENTOMOLOGY FOOD NUTRITION & CULINARY SCIENCES FOOD TECHNOLOGY FOREST RESOURCES MANAGEMENT PACKAGING SCIENCE PLANT AND ENVIRONMENTAL SCIENCES WILDLIFE & FISHERIES	WATER MANAGEMENT

	COLLEGE OF BEHAVIOURAL STUDIES AND HEALTH STUDIES	ARCHEOLOGY COMMUNITY HEALTH PSYCHOLOGY CRIMINAL JUSTICE NURSING PSYCHOLOGY PUBLIC HEALTH SCIENCES SOCIOLOGY SPORTS COMMUNICATION	APPLIED HEALTH RESEARCH & EVALUATION ARCHEOLOGY CLINICAL & TRANSLATIONAL RESEARCH CRIMINAL JUSTICE HEALTH SYSTEM SCIENCE PUBLIC ADMINISTRATION PARKS, RECREATION, & TOURISM MANAGEMENT MENTAL HEALTH TRAINING NURSING NURSING PRACTICE POLICY STUDIES PSYCHOLOGY SOCIOLOGY GERONTOLOGY	HEALTH RELATED RESEARCH - PHYSICAL, RURAL ECONOMIC & COMMUNITY HEALTH

Priority programs determined by each College are shown above. Establishing and assessing this list allows Clemson to understand how to prioritize programmatic moves in their capital schedule strategy to create opportunities for departmental colocation and to accommodate the growing needs of specific programs. This process gives an equal opportunity for each

College to have them identify the programs they most wish to grow or change and have them assessed in relation to one another through the prioritization criteria and methodology.

Strategy+ engaged with the project team and stakeholders through workshops and questionnaires to curate and finalize this list of

	College	Undergrad	Graduate	Research
	COLLEGE OF BUSINESS	ACCOUNTING ECONOMICS FINANCIAL MANAGEMENT MARKETING PRE-BUSINESS MANAGEMENT	ACCOUNTING BRAND COMMUNICATIONS BUSINESS ADMINISTRATION	HIGH QUALITY JOURNAL PUBLICATION

priority programs. This program collection is the result of a holistic process to capture the essential each integral part of every college and department.

The tables on page 10-11 are created by highlighting programs with the largest enrollment and the fastest growing enrollment

by undergraduate and graduate programs. Programs were also supplemented by the request of College Deans. The tables on page 10-11 identify the priority programs by each college and by academic type: undergraduate, graduate, and research.

PROGRAM MOVES

PRIORITY PROGRAM MOVES

The 15-year capital plan sequences both renovations and new construction. This is supplemented by a deeper investigation into the types of spaces produced by these projections and the type of academic programs that can benefit from using them.

The capital plan creates an opportunity for Clemson to accommodate the growth of priority programs and for departments to maximize colocation opportunities. This also allows Clemson to create hubs of academic specialty with each renovation or new building.

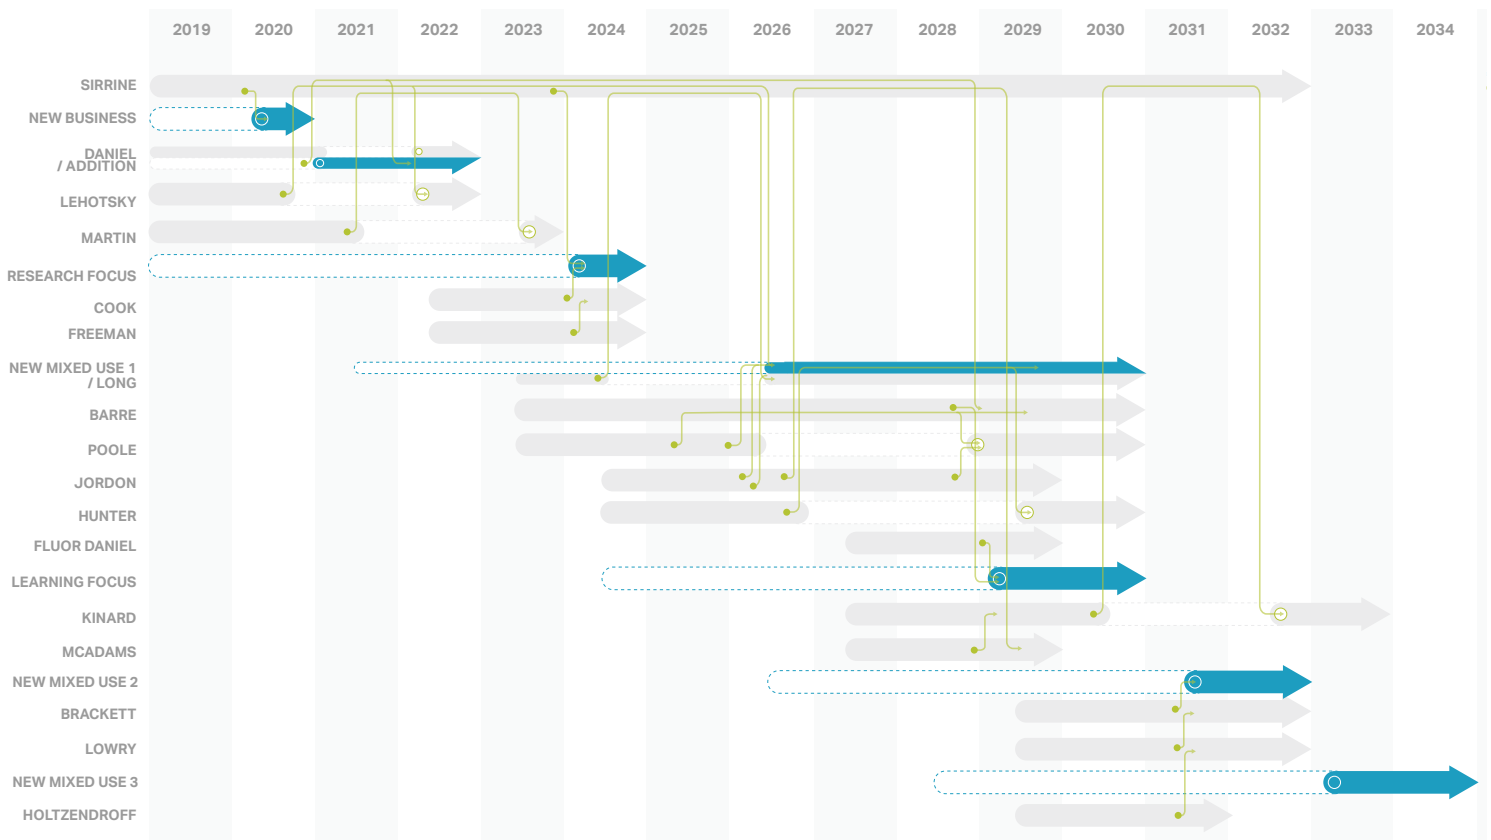

The sequence of priority program moves is determined by the quadrant priority

methodology. Identifying which programs have more urgent needs to grow or move informs program moves within the capital plan.

Sirrine plays a very important role in the capital program moves schedule. Sirrine has the capabilities of becoming an integral transition swing space for programs to temporarily move into as they await their new location.

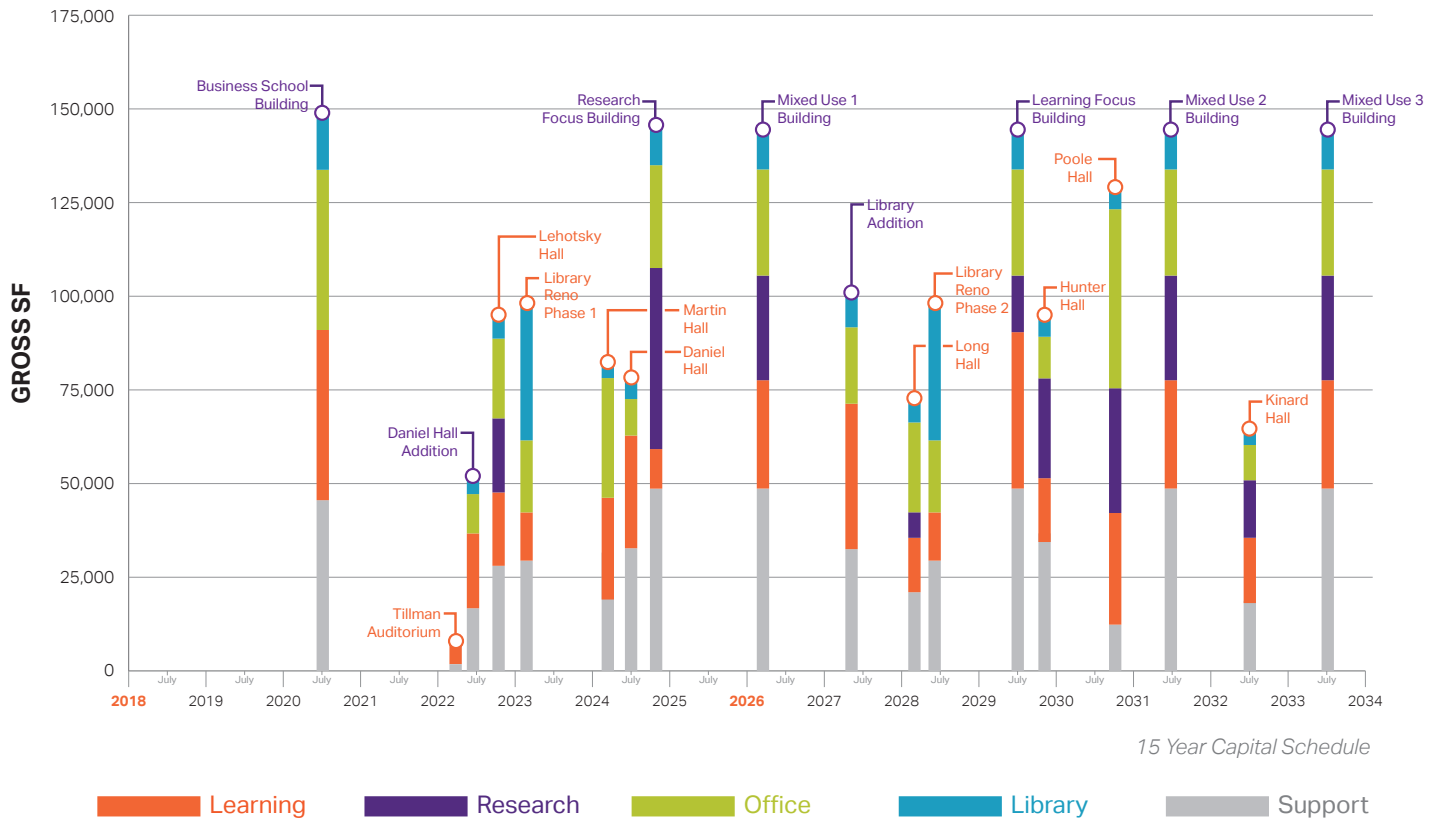

These moves allow programs to synergize, as well as creating larger open areas for programs to grow in their relevant buildings as others move out.

A detailed diagram of program moves is located

Priority Program Moves

CAPITAL SCHEDULE

Strategy+ and Clemson University worked closely together to establish a 15-year capital plan to accommodate the future goals and needs of the University. The product above, through months of workshops, engagements, interviews and site visits, addresses the issues of future space deficit and program moves aligned with the goals of ClemsonForward.

The capital plan projects shown above are each dissected by their space contributions in learning, research, office, library and support. The schedule combines CPIP projects, new renovations, and new construction projects. The capital plan assumes each new completed project

will adhere to the state standard of a 67% utilization rate.

Ultimately, this series of planned relocations will create academic clusters focused on uniting College departments together and grouping interdisciplinary synergies identified during the prioritization exercise.

“ Each new completed project will adhere to the state standard of a 67% utilization rate ”

INPUTS AND SOURCES

CLEMSONFORWARD GOALS

ClemsonForward Strategic Plan

The ClemsonForward strategic plan is the primary data source for establishing the future vision and goals of the university.

The metrics established by ClemsonForward allows Clemson to examine their current trends and develop, implement and monitor activities in response.

ClemsonForward is broken into three main categories:

- Research
- Academic Core
- Learning / Living

Each of these categories set outs specific goals and targets for Clemson to aspire towards. As seen in the graph below.

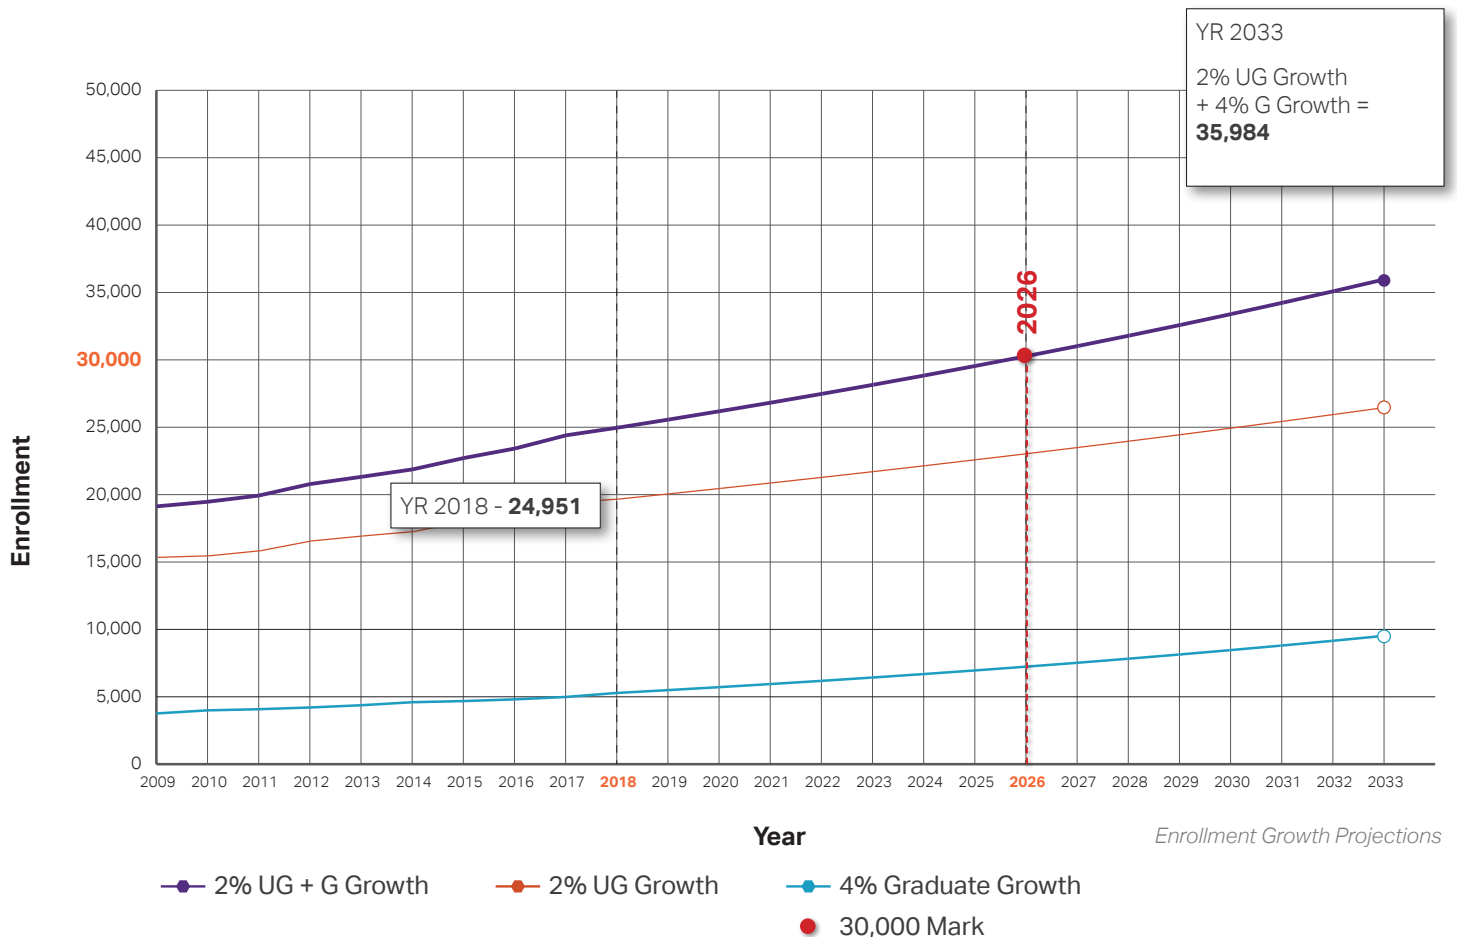

In addition, to these metrics, each college from Clemson has produced a dashboard to highlights each of their own targets according to the goals of ClemsonForward. These metrics and established goals are all considered in creating space projections, program priority and capital scheduling.

The key drivers for the projections of space and the scheduling of capital projects are the Research, Academic Core and Learning / Living goals set out in the ClemsonForward strategic plan.

RESEARCH	Increase annual submission in research proposals by 80% to \$1B
	Increase externally-funded research expenditures to \$100M/yr
	Increase annual production of nationally recognized forms of scholarship by 50%
ACADEMIC CORE	Rank among the nation's top-10 public universities in undergraduate student success, as measured by freshman-to-sophomore retention and graduation rates
	Increase doctoral degrees awarded by 50%
LEARNING / LIVING	Enroll a student body that is at least 15% from underrepresented groups
	Double # of all underrepresented instructional faculty members

ClemsonForward Strategic Goals

ENROLLMENT GROWTH

To establish space projections and a capital strategy plan for all departments and schools at Clemson University, multiple inputs, data points and sources were identified and integrated into a holistic calculation methodology. This methodology takes into account the growth needs of each College in conjunction with the ClemsonForward Strategic Plan.

Working directly with Institutional Research, Strategy+ aligned enrollment data with ClemsonForward goals to project an enrollment

growth scenario until 2033. This scenario used the following assumptions:

- Combined enrollment of Undergraduate and Graduate students of 30,000 by 2026
- Annual 2% UG growth and 4% Grad growth

These variables result in an enrollment of 35,984 by 2033.

Enrollment data is used for calculating learning, research, and library space in relation to priority program metrics.

FACULTY GROWTH

Alongside understanding how enrollment of students grow, faculty and PI growth will be equally as important. Faculty and research growth will be tied to understanding research space and office space requirements for the future.

Faculty growth is designed to improve future student-faculty ratios for an improved learning experience. PI growth is designed to maintain growth in research proposals, and expenditures and awards in line with ClemsonForward goals and maintenance of Clemson’s R1 status.

This growth model utilizes the following data:

- Institutional Research – Enrollment
- FY2019 Research Report Card
- ClemsonForward Dashboards
- Faculty and PI counts
- Strategic Enrollment Plan

In 2026, Clemson is projected to have 1,177 PIs and aims to grow by 220 PIs according to the Strategic Enrollment Plan.

EXPENDITURE / RESEARCH GROWTH

Faculty and PI population growth has a direct relationship to growth in research expenditures. Projections of research space needs and strategic research allocations can be achieved by analyzing the types of research produced by each department, College and PI.

This data insight produces trends in what is proving to be successful in varying research areas and what needs to be prioritized as future Clemson Research goals.

The graph above illustrates growth in faculty on the basis of current faculty / student ratios,

it considers all new hires to be PI or research support. This growth is also aimed to improve the student faculty ratio and improve staff needed for support.

Expenditure and research data uses the following data sources:

- FY13-FY18 Expenditures Research Data
- FY2019 Research Report Card
- College Research Lab Space and Research Productivity
- ClemsonForward Dashboards
- Institutional Research – Enrollment Data

PRIORITY PROGRAM SURVEY

QUESTIONNAIRE ASSESSMENT AND RESULTS

PRIORITY PROGRAM SURVEY

3. To better understand your undergraduate learning priorities, rank each of the metrics from most important (1) to least important (9), in terms of accurately representing the college's priority academic programs and their respective departments. *

* Drag items from the left-hand list into the right-hand list to order them.

Enrollment growth, by growth rate over the last five years	1. Enrollment growth, by volume over the last five years
Total program enrollment	2. Programs with capped enrollment the college would like to see grow
Programs the college has prioritized, as part of their strategic vision	3. New programs
Volume of general education enrollment offered by the department	4. Growth of general education enrollment over the past five years
	5. Programs that are prioritized by ClemsonForward

For the College of Behavioral Studies and Health Sciences (CBSHS), the priority undergraduate programs that have been identified are as follows:

- Nursing
- Psychology
- Sports Communication
- Archeology
- Gerontology
- Parks, Recreation, and Tourism Management
- Public Health Sciences

Are there any additional priority undergraduate programs that should be included in this list?

For CBSHS, the priority graduate programs that have been identified are as follows:

- Public Administration
- Parks, Recreation, and Tourism Management
- Nursing
- Applied Health Research and Evaluation
- Nursing Practice
- Clinical and Translational Research
- Health System Science
- Psychology
- Policy Studies
- Criminal Justice
- Mental Health Training
- Archeology

Are there any additional priority graduate programs that should be included in this list?

Priority Program Survey for College Deans

In August 2019, Strategy+ engaged the stakeholder leadership team of Clemson with a priority program survey. The goal was to understand holistically how each stakeholder prioritized their college in terms of learning program growth, research growth and spatial demands. The results provided insights into specific metrics to be used in assessing the future space needs of Clemson.

These results informed a quadrant mapping exercise that drove the capital plan sequencing of research and learning programs in new constructions and renovations.

Illustrated on the following pages is a snapshot of the results of the survey questions which informed the final lists of prioritization criteria. Each of the criteria was weighed according to the results of the survey and vetted by the Provost's Office and the Office of Research, and validated by data from the Offices of Institutional Research and Enterprise Data and Analytics.

Refer to pages 37-60 for further details of the calculation methodology, criteria weightings and priority program results that drove the capital plan.

QUESTIONNAIRE ASSESSMENT AND RESULTS

- Public Administration and Social Service Professions
- Social Sciences
- Business, Management, Marketing, and Related Support Services

Priority Program Categories

When calculating space needs, each program is investigated to understand the type of activity, experience and equipment requirements it has, current and future. Programs have different space needs as varying learning environments have varying learning needs. All learning programs have different mixes of pedagogy, contact hours and complexity of academic activities and curriculum. Research programs also vary in needs of staffing, environmental, technological and equipment requirements.

To calculate space, each program from Clemson was placed into one of 4 program intensity types

according to its CIP code: Intensity 1, Intensity 2, Intensity 3 and Intensity 4. Each intensity type represents a different spatial need for learning and research. Program intensity 1 requires the largest amount of space and intensity 4 requires the smallest amount of space.

Each intensity has a space metric assigned to it for learning and research. This metric takes into account, not only the spatial needs of activities in the respective programs by division, but also the time spent in each activity. This metric is used in conjunction with population forecast to predict the overall space needs for each program.

Intensity 1

Intensity 2

Intensity 3

Intensity 4

Program Intensity 1 has the largest space requirements. It contains programs such as agriculture, performing arts and environmental sciences. Programs in this category require large equipment, large work areas, performance spaces and large collaborative group areas.

Program Intensity 2 have lower space requirements than intensity 1. These programs have equipment space needs for medium to large scale projects. Intensity 2 is akin to scale-up and small construction type areas. Programs in this category are engineering, transportation, biological sciences, and urban design.

Program Intensity 3 programs still require equipment and collaboration but have smaller workspace requirements. Programs in this category are communication, journalism, and psychology. Each user might have a dedicated work area with the supporting technology.

Program Intensity 4 has denser environments. These are typically lecture halls with auditorium type seating. Programs in this category can be taught in large groups. Programs in this category are mathematics, philosophy, social sciences and business related majors where research space requirements are minimal.

SPACE CALCULATIONS

LEARNING SPACE

NON-SCHEDULED STUDY SPACE

Strategy+ worked closely with Clemson to develop space calculation methodologies to fit the needs of Clemson goals.

Learning Space

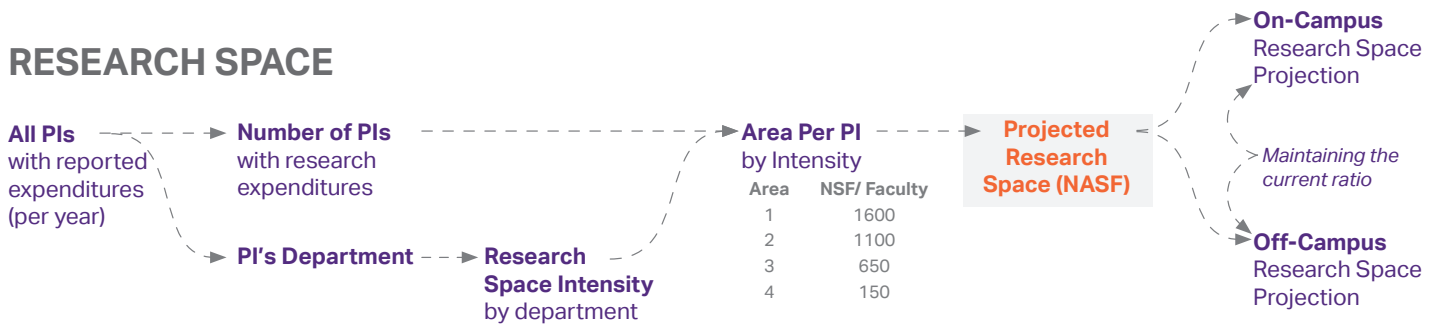

This calculation uses enrollment and program intensity data. Each program intensity has a SF / user multiplier for undergraduate, masters and PhD. The multiplier was adjusted from agreed national standards in collaboration with Clemson Stakeholders. To calculate, program enrollment is multiplied by adjusted base area / FTE.

Non-Scheduled Study Space

This category examines study areas, breakout space, and other rooms identified for non-credit / contact hour study. The calculation uses the sum total enrollment of undergraduates and graduates and assumes 1 hour of non-scheduled learning needed is equal to 1 credit hour. This yields total non-scheduled time needed. This number is then divided by 40 (hours per week) and multiplied by the baseline study space needed per student to arrive at the total non-scheduled study space required.

SPACE CALCULATIONS

RESEARCH SPACE

OFFICE SPACE

Research Space

This calculation utilizes the number of principal investigators and associated expenditures by PI and department. Similar to learning space calculations, research space is divided into 4 intensity space types. PI count by department is multiplied by its associated intensity base area per FTE. This calculation yields total research space. The ratio of PIs engaged in off-campus research to on-campus research was used to determine the on-campus only research space requirements.

Office Space

This calculation assigns SCHC space standards square footage to faculty and staff. The primary data used for this is faculty and staff full-time equivalents, which takes into account part-time as well as full-time employees. Assigning the standard 120 SF office size to each full-time equivalent yields total projected office space as well as associated meeting and service space.

SPACE STANDARDS

Supply

RESEARCH

93.8%

research space effectiveness, based on FCI to account for suitability and quality

LEARNING

58% utilization for centrally scheduled classes

25.3% utilization for departmentally scheduled classes
classroom utilization for existing space, based on course scheduling within a 40 hour week

OFFICES

quantity not size

of offices for faculty, staff, student services, and administration

Demand

3%

of scheduled instruction hours are online and do not require physical classroom space

1 credit hour : 1 hour

of non-schedule learning, including library, breakout, and other learning resources

For each of the space type calculations, Strategy+ worked closely with Clemson leadership and stakeholders to curate modifiers to reflect more accurately the effective space use of each type: learning, research, non-scheduled study, and office.

For research space, a modifier of 93.8% is used to reflect the effective research space available on campus. This assumption is based on metrics produced from the FCI and building year to

account of suitability and quality.

Offices assumed quantity not size of existing office areas. Office space calculated primarily on counts of faculty, staff, student services and administration.

There is a 3% modifier applied to calculated learning space to accommodate scheduled online learning. Thus, not requiring a physical classroom.

Every state has calculation standards for varying learning and research space types. However, the majority of these standards were established a long time ago. Learning and research styles have evolving progressively with technology over the last decade.

These standards are a good starting point to understand the calculations but require modification to suit each institutions goals and vision. By examining and comparing state

standards, Clemson can position themselves in how they want to define success on their own terms.

It is important to note that standards are not tied to expenditure success and results. These are defined metrics to aid in that success, but every state and school operates their research differently. Therefore, modification is essential in aligning work productivity and space effectiveness.

It's not all
about
the work,
it's about
the people.
— Steve Jobs

Clemson Current CPIP

The initial step to creating the 15-year capital plan for Clemson University, was to understand Clemson’s current Comprehensive Permanent Improvement Plan (CPIP). The CPIP outlines new buildings and renovation projects that are either scheduled or approved for improvement. The projects listed in the CPIP are essential in tackling projected space deficits and provide a unique opportunity to leverage their renovations to improve space utilization, efficiency and productivity as well as physical condition.

Renovation projects on the CPIP with direct implications on the 15-year capital plan are: Tillman Auditorium, Lehotsky Hall, Martin Hall, Daniel Hall, and Long Hall

These renovation projects provide the opportunity to accommodate space deficits, enhance utilization as well as creating new long term program synergies, collaborations and learning and research pedagogies and activities.

FACILITY CONDITION + UTILIZATION

FCI and Utilization by Building on Campus

Beyond buildings on the current CPIP, there are other buildings suitable for renovation and improvement that will help to diminish Clemson's deficiency of space through improved utilization. In developing the 15-year capital plan, the team investigated the potential for reprogramming existing buildings to create better co-locations of departments and programs. Metrics and goals of enhanced program adjacency, improved utilization, and suitability are factored together to calculate the priorities of the capital plan.

The diagram above highlights the FCI and utilization of each documented building on campus. The facilities condition index data was received from Clemson Facilities Team. The building utilization data was received from the Office of Strategy & Analytics. The diagram helps illustrate which buildings have priority and potential for renovation. The priority needs are those with a high FCI and a low utilization.

INCREASED UTILIZATION

Utilization is a key metric in understanding how effectively current space is being used. Utilization data metrics are measured through course scheduling and room bookings through a typical 40-hour week. The Office of Strategy and Analytics and Registrar’s office provided data to Strategy+ to assess campus and building utilization.

Currently, Clemson operates around 50% average utilization. This yields a capacity of 18,416 students. The target utilization by South Carolina Council of Higher Education is

suggested at 67%. If Clemson, improves its utilization to SC standards, it can reduce its space capacity deficit without renovating or building new space.

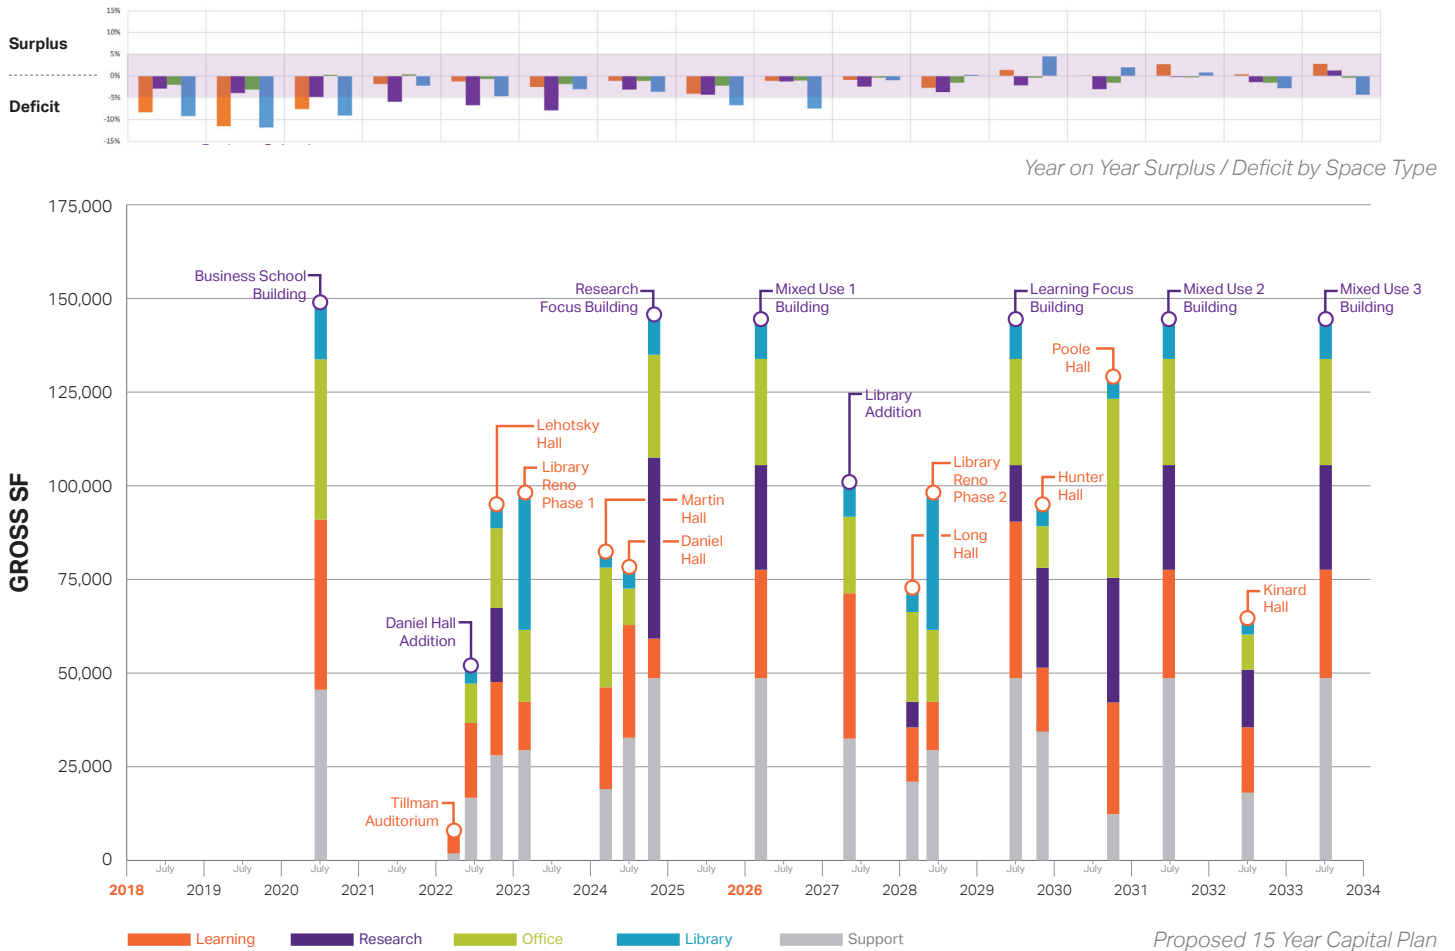

The assumption placed for the capital plan scheduling is a utilization of 67% for all new buildings and renovations. If, 67% utilization is achieved across campus including the next two new buildings of Business School and Daniel Hall Addition, Clemson can accommodate approximately 25,898 students.

— SC CHE Utilization Standards for Planned Capital Projects - - - SC CHE Utilization Standards for Suggested Capital Projects
 — Improved Utilization Standards for Planned Capital Projects - - - Improved Utilization Standards for Suggested Capital Projects

Space Effectiveness by Utilization

KEEPING UP WITH DEMAND

The space projections for Clemson’s 15-year capital plan are separated into 5 categories.

- Learning
- Research
- Non-scheduled study
- Office
- Support

If no changes are made to the campus, in 2033 it is projected that Clemson will have a 1,066,184 SF deficit. It is recommended when undertaking capital investments that Clemson aims to keep the deficit and surplus targets within +/- 5%.

The table and chart above illustrate the project sequencing for the 15-year capital plan. The orange labels represent renovation projects and the purple labels represents new construction. The graph at the top illustrates the deficit and surplus effects of the capital plan sequencing. Each new renovation and construction assumes an increase in effective space use to 67% utilization.

This capital plan was developed through the collaboration of Strategy+, the Office of Academic Affairs and the University Planning and Design department.

“ AECOM is developing a tool with Clemson to prioritize capital projects and programs. The product is a matrix of combining learning, research and spatial needs of each priority program. ”

***This is the initial starting list. Additional Programs were added through engagements and workshops*

After establishing the process to sequence the capital plan and address space deficits and surpluses, the following step is to sequence what programs will move into new or renovated space to accommodate program growth and better colocation.

Working closely with College Deans and Provost, a priority program list was created to understand which programs have the most need and most potential in the future growth of Clemson. The two tables above are an initial list created by

Graduate/Research Program	Program Intensity
1 Education	4
2 Teaching and Learning	4

largest enrollment and fastest enrollment growth by undergraduate and graduate programs.

Strategy+ then engaged with project team and stakeholders through workshops and questionnaires to identify additional valuable programs to add to the list. This process captured a holistic picture of all essential programs needs integral to each college and department. The next section describes how each of these identifies programs will be measured.

QUESTIONNAIRE AND INPUTS

In order to use data to measure the needs of each identified priority program, a series of metrics were created to measure learning, research and space needs. The list of metrics was derived from data received, ClemsonForward goals, Dean’s goals, stakeholder goals, and academic data trends.

Once the metric inputs were established and finalized by the project team, they were placed in a questionnaire and distributed to each College Dean. The aim of the questionnaire was to understand how each College prioritizes each metric relating to learning, research and space. This process allowed an equal opportunity

among all constituents to create a holistic prioritization methodology.

At the end of the questionnaire, the scores and ranks of each metrics were averaged to create a total weighted scorecard for each category. The questionnaire created the opportunity to allow certain metrics to have a higher weight in its consideration for how the program is prioritized.

Three separate scorecards were created and were used in the final priority methodology for Undergraduate Academics Programs, Research and Graduate Programs, and Spatial Demand.

METRIC	OVERALL RANK	RANK DISTRIBUTION	SCORE (POINTS)	NO. OF RANKINGS
Programs the college has prioritized, as part of their strategic vision	1		15	7
Total program enrollment	2		14	7
Enrollment growth, by volumn over the last five years	3		13	6
Volume of general education enrollment offered by the department	4		12	7
Programs that are prioritized by ClemsonForward	5		12	7
Enrollment growth, by growth rate over the last five years	6		12	6
Growth of general education enrollment over the past five years	7		10	6
Net Position	8		6	7
Programs with capped enrollment the college would like to see grow	9		6	6

SCORECARD METRICS

WHAT ARE THE METRICS

Undergraduate Academic Program Metrics

1. Enrollment Growth, by volume over the last five years
2. Enrollment Growth, by growth rate over the last five years
3. Total program enrollment
4. Programs the college has prioritized, as part of their strategic vision
5. Programs with capped enrollment the college would like to see grow
6. New UG academic programs
7. The volume of general education enrollment offered by the department
8. Growth of general education enrollment over the past five years
9. Programs that are prioritized by the Provost as part of the university's vision

Research and Graduate Program Metrics

1. Total research expenditures
2. Expenditures per PI
3. Expenditure growth rate (last 5 years)
4. Alignment of research expenditures with ClemsonForward targets
5. Priority Areas of Research
6. New Areas of Research
7. PhD Production
8. Graduate enrollment growth, by volume over the last five years
9. Graduate enrollment growth, by growth rate over the last five years
10. Total graduate program enrollment
11. New graduate programs
12. Graduate programs the college has prioritized, as part of their strategic vision

Spatial Demand Metrics

1. Learning space surplus or deficit by ASF
2. Research space surplus or deficit by ASF
3. Building condition by FCI
4. Ongoing repair and maintenance costs
5. Suitability of equipment and technology

To objectively assess academic program and research priority, a collection of metrics was established to respond to the priorities of the department of university planning and design, the College Deans and Associate Deans, ClemsonForward, and the University's vision.

Metrics of Each Category for Quadrant

The priority programs are measured in three categories: Undergraduate Academics Program Metrics, Research and Graduate Program Metrics, and Spatial Demand Metrics. Each metric was identified as a valuable data point in reflecting the needs of each respective category.

Each of the listed programs was scored using each metric using data from university sources. Each metric score was then adapted with a modifier based on the priority weight that resulted from the questionnaire.

WHAT ARE THE INPUTS & SOURCES

The metrics used in the scorecard categories were derived from a number of agreed University sources. These data sources were used in their respective metric to generate the comparative program data needed. The table to the right lists all the data sources used in the metric calculations.

Undergraduate Academic Program Metrics

This category examines the priority growth needs of undergraduate learning programs. It uses data from the sources of student enrollment, student credit hours, course section fill rate, college strategic plans, room course utilization, room scheduling data, and CU strategic undergraduate enrollment plan.

Graduate Program Metrics

This examines priority graduate research and program growth needs. These metrics use employee data, faculty instructional load, enrollment data, research expenditures data, research report card, research facility needs, college dashboards, research lab space and productivity data, and college strategic plans.

Spatial Demand Metrics

This category examines the condition and program capacity of current space. These metrics use data from research maintenance, capital project Facility Condition Index / Building Condition Assessment, Clemson Comprehensive Permanent Improvement Plan, Clemson building attribute summary, room inventory data, and campus existing space data.

DATA SOURCES

100 PTS

Questionnaire Learning Results

There is a total of nine metrics in Undergraduate Academic Program Metrics. The table above highlights the weighted score of each metric as a result of College responses from the questionnaire.

Metrics that use quantitative data are as follows.

- Total program enrollment compares total enrollment of each listed program.
- Enrollment growth by volume compares the quantity of growth over the last five years.
- Volume of general education enrollment offered compares total volume of enrollment of general education in the program.
- Enrollment growth by growth rate compares the rate of growth and not volume.

- Growth of general education compares the volume of enrollment change over the past five years.

Metrics that use qualitative data are as follows.

- Programs the College has prioritized as part of their strategic vision highlights which programs reflect college's priority.
- Programs with capped enrollment the College could like to grow highlights those that can't grow due to restraints.

The results of each program metric are compared only with other priority programs. Therefore, the score range is defined by the results of the identified priority programs.

HOW ARE THEY SCORED - RESEARCH

METRIC	OVERALL RANK	RANK DISTRIBUTION	SCORE (POINTS)	NO. OF RANKINGS
Priority areas of research	1		15	7
Total research expenditures	2		14	7
Graduate programs the college has prioritized, as part of their strategic vision	3		13	7
Expenditures per PI	4		13	7
PhD production	5		11	7
Expenditure growth rate over the last five years	6		11	6
Total graduate program enrollment	7		11	7
Alignment of research expenditures with Clemson Forward targets	8		10	7
Graduate enrollment growth, by volume over the last five years	9		6	6

100 PTS

Questionnaire Research Results

There is a total of nine Graduate Program Metrics. The table above highlights the weighted score of each metric as a result of the questionnaire.

Metrics that use quantitative data are as follows.

- Total research expenditures compare the total department research expenditures in a research program .
- Expenditures per PI compares the expenditure dollar amount of each PI by program.
- PhD production compares the total headcount of PhD in their respective programs.
- Expenditure growth rate compares the department expenditure growth over the past five years by percentage.

- Total graduate program enrollment compares total headcount by program.
- Graduate enrollment growth by volume compares quantity change in last five years.

Metrics that use qualitative data are as follows.

- Priority areas of research allows Deans to place the importance of their strategic vision research goals.
- Graduate programs the College has prioritized as part of their strategic vision highlights which programs reflect College's priority.
- Alignment of research expenditures with ClemsonForward targets highlights the importance of adhering to the goals set out by ClemsonForward.

HOW ARE THEY SCORED - SPACE

METRIC	OVERALL RANK	RANK DISTRIBUTION	SCORE (%)	NO. OF RANKINGS
Learning space surplus or deficit (by ASF)	1		29%	7
Building condition (by FCI)	2		23%	7
Research space surplus or deficit (by ASF)	3		22%	6
Suitability of equipment and technology	4		13%	7
Ongoing repair and maintenance costs	5		13%	7

Questionnaire Space Results

There is a total of 5 Spatial Demand Metrics. The table above highlights the weighted score of each metric as a result of the college responses from the questionnaire.

These metrics use data from research maintenance, Capital project Facility Condition Index / Building Condition Assessment, Clemson Comprehensive Permanent Improvement Plan, Clemson building attribute summary, room inventory data, campus existing space data.

The metrics below are measured as follows:

- Learning space surplus or deficit by ASF compares the program’s current learning space with its projected space. By quantity of ASF, programs with higher deficits receive a higher score to reflect their need for growth.
- Building condition by FCI compares the condition of the buildings each program resides in, and or an average of all the buildings they are part of.
- Research space surplus or deficit by ASF compares the program’s current research space with its project space. By quantity of ASF, programs with higher deficits receive a higher score to reflect their need for growth.
- Suitability of equipment and technology compares data from the room inventory data.
- Ongoing repair and maintenance costs compares the sum total of repairs a building undergoes. These buildings are linked to their respective programs and departments.

QUADRANT DIAGRAM

QUADRANT DIAGRAM

METHODOLOGY

Strategic Undergraduate Academic Growth

Provide a methodology to holistically assess priority academic programs based on growth trends, student success, and college prioritization

Graduate and Research Growth

Provide a methodology to holistically assess priority graduate programs and research based on growth trends, alignment with ClemsonForward, and college prioritization

Space Availability

Understand the size, quality, and suitability of space currently supporting each academic program and ensure sustainable program growth and flexibility

Prioritization and Right-Sizing of Capital Projects

A collection of metrics are used to align each college's strategic academic and research growth with the current availability of space to prioritize and right-size capital projects over the next 15 years.

Quadrant Methodology Process

In order to align the metric categories of Strategic Undergraduate Growth, Graduate and Research Growth and Space Availability, Strategy+ created a quadrant system to populate the hierarchy of priority programs.

As undergraduate academic has separate metrics of growth from graduate and research, two quadrants have been created to reflect the program needs of each category. They will both be measured against space metrics to produce the structuring of the capital plan. The three areas of metrics combined produce a prioritization and right-sizing of capital projects.

As stated above, a collection of metrics are used to align each College's strategic academic and research growth with the current availability of space to prioritize and right-size capital projects over the next 15 years.

This method was created to capture the holistic support of all colleges and best represent their future research and learning needs. The metrics in the methodology aim to reflect every aspect of a program that needs to be considered without bias. Through close collaboration of Strategy+ and Clemson, this methodology has been supported across all the Colleges.

HOW DOES IT WORK

- Criticality** ↑
- Priority I**
HIGH demand programs + LOW space availability
 - Priority II**
LOW demand programs + LOW space availability
 - Priority III**
HIGH demand programs + HIGH space availability
 - Priority IV**
LOW demand programs + HIGH space availability

Weighing strategic growth metrics against the spatial demand, a quadrant system is used to determine the sequencing and priority of capital projects to support academic programs.

The methodology and metric results are inputted into a quadrant system. The quadrant methodology chart is split into 4 areas.

- Priority I (Top Right)
- Priority II (Bottom Right)
- Priority III (Top Left)
- Priority IV (Bottom Left)

The Y-axis is the results of the learning program growth scores or the research growth scores. The X-axis is the results of the spatial demand scores. The higher the score on the Y-axis, the higher demand the program is based on learning

and or research. The higher the score on the X-axis, the lower the availability of suitable space for the program, which indicates a higher need to be prioritized.

The end result has the identified priority programs populated across the four quadrants.

COLOCATON OPPORTUNITIES

Establishing the 15-year capital plan and integrating priority programs, creates an opportunity for departments to maximize colocation opportunities. As programs move to new buildings or swing spaces, colleges can progressively move distant programs to closer program proximity to heighten learning and research synergies.

The program moves diagram references the priority program needs from the learning and research quadrant chart. It is evident that Sirrine plays a very important role in the capital program moves schedule. Sirrine has the capabilities of becoming an integral transition space for many programs to temporarily move into as they await their new location.

This process of using Sirrine as a swing space, allows departments to consider how to best collocate their program synergies for the future. Many of the moves highlighted in the diagram, allow new construction buildings to become a newly focused program themed building.

These moves allow programs to synergize, as well as creating areas for programs to grow as others move out.

Further down the line, a key essential component to Clemson education are the general education courses. A new building will be dedicated to this program growth and create a more cohesive general education experience for all incoming students in 2029.

15 YEAR CAPITAL PLAN

Strategy+ and Clemson University worked closely together to establish a 15-year capital plan to accommodate the future goals and needs of the University. The product above, through months of workshops, engagements, interviews and site visits, addresses the issues of future space deficit and program moves aligned with the goals of ClemsonForward.

The capital plan projects shown above are each dissected by their space contributions in learning, research, office, library and support. Space projections for the entire University are also dissected into these space categories. Using these two comparative points, the

sequencing of capital projects addresses the right sizing of the University deficits by 2026 and its growth by 2034, while maintaining the space surplus deficit within a 5% range.

The 15-year capital plan is also paired with the priority program moves diagram. As each renovation or new construction opens, a sequencing of program moves is planned to facilitate the colocation of departments. Ultimately, this series of planned relocations will create academic clusters focused on uniting College departments together and grouping interdisciplinary synergies identified during the prioritization exercise.
